

DOM HEALTH

PRODUCT CATALOGUE

We believe in quality products that are readily available and affordable.

Domhealth is a New Zealand owned and operated animal health company, developing and manufacturing animal health products that are distributed nationwide.

We've been providing innovative animal health solutions through products and technical support since 1988.

Domhealth products cater for your companion animal whether that's your horse, alpaca or dogs. In addition, there is a whole suite of products to solve animal health issues for production animals (dairy, beef, sheep, pigs, chickens and deer) as well.

Domhealth animal health products are safe for both the person administering, and the animal. Most Domhealth products have no withholding period, so they can be used all year round. Whether you have an equestrian or horse racing interest, or farm animals to take care of, Domhealth likely has a solution for you.

DAIRY RANGE

Available in: 500ml, 2 Litre, 5 Litre,

MORE-MAG®

More-Mag® has a role in NZ Agriculture. New Zealand has more than 4 million dairy cows, exporting more than 90% of the milk produced. This makes dairy farming hugely important to New Zealand agriculture. Dairy cows in NZ are predominantly in a grazing system, and NZ dairy farmers are renowned worldwide for being agricultural leaders in milk production from pasture.

The vast majority of NZ dairy cows calve in spring, and even though the climate is classed as temperate, metabolics from magnesium and calcium deficiency are common. For more than 15 years, More-Mag® has been trusted by NZ dairy vets and NZ dairy farmers.

More-Mag® has independent research trials to show that the magnesium in More-Mag® lasts for longer than traditional forms of magnesium. One oral drench dose will last for up to 10 days which makes More-Mag® a strategic tool in the agricultural toolbox. Identifying and dosing just the dairy cows "at-risk" of being downer cows makes More-Mag® cost-effective for any farm in NZ. And, because it's not a daily drench, there is minimal human interference pre-calving which is ideal for the NZ desire of easy-care agriculture.

You can get More-Mag® from your local Veterinarian, RD1, PGG Wrightson, Farmlands or CRT store. You can also buy online from <https://clark-products-nz.myshopify.com>

MANDERSON'S MIX

Manderson's Mix™ is a drench containing a combination of oils that may help animals suffering from stress.

A blend of four oils designed to calm animals. A combination of the oils Castor Oil, Olive Oil, Linseed Oil, and Cod-liver Oil in the right proportions. The unique properties of these oils work to offer your stock relief during times of stress.

Manderson's mix™ is a good nutritional supplement at any time of year when animals are suffering stress, also supports a healthy coat.

Features:

- Palatable
- Easy to dose
- All natural ingredients

Benefits

- Can help to reduce animal stress
- NIL withholding period product.

Available in: 2 Litre, 5 Litre, 20 Litre, 200 Litre

FLY AX

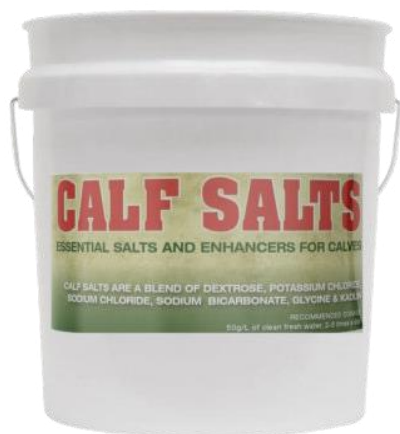

Fly-Ax™ is a granular bait that is highly attractive to many species of flies including house flies, blow flies, biting, nuisance and bot flies. Fly-Ax™ has a fly sex attractant plus other ingredients to attract flies, flies feeding on the bait are quickly killed either by ingestion or contact.

There are many species of fly that effect animal production. Sheep are affected by blow flies that lay eggs on the fleece and can burrow onto the skin the feeding larvae cause the wound to spread leading to severe irritation, loss of appetite, rubbing, biting dehydration and infection-death. Dairy cow production can be affected by the biting /nuisance fly, these irritate the animal causing them to stamp their feet swish tails and not eat.

Horses and other domestic animals are also affected by these flies which also known as stable flies cause high levels of annoyance and distress. Animals become irritated and hard to handle. Fly-Ax™ is a preventative product because it works on preventing fly populations from establishing.

NZSFA Approval

Fly-Ax™ is approved for use in premises registered under the Animal Products Act, NZSFA Approved Type B (all animals except dairy) This means that Fly-Ax™ is approved for use around food producing animals and all premises processing animal product except dairy factories or in areas processing edible product.

CALF SALTS

Domhealth calf salts are a blend of dextrose, potassium chloride, sodium chloride, sodium bicarbonate, glycine and kaolin. This blend contains essential nutrients for calves.

Designed to assist with treatment for calves which are scouring as a result of bacterial, viral or nutritional causes.

Available in: 3kg, 25kg

Customer Feedback:

"I recently revived a sample 100mL bottle of More-Mag from your sponsorship at the Kihikihi International Horse Trial. I recently used this sample on my wonderful eventer who is normally very cool, calm and collected whilst competing but is a completely different horse on the hunt field. His first time out he was nervy, excited and jumpy from the new experience. I decided I would try the More-Mag on his next hunting adventure – which happened to be opening hunt at Taupo Hunt Week with 300 plus horses in the field. The results were TREMENDOUS! He was so well behaved, walking calmly with other horses and coped extremely well in this situation. I am so thankful for your wonderful product and for your support at Kihikihi International Horse Trial. I am now off to buy the biggest container I can find of your magical product. Yours Thankfully

Nikki

DOM HEALTH

Customer Feedback:

"I As the operator of a pet cremation business, we are responsible for the respectful and dignified final care of household pets and livestock. Last Christmas we were faced with the unfortunate experience of attending to a cow that had not been chilled for a couple of days. Flies were overtaking the facility and neighboring tenants were of course not pleased. I simply opened a 500g pot of FLY AX and crossed my fingers. It seemed too small to have any impact. Spray certainly wasn't touching the problem and the space to be treated seemed too vast. I need not have worried. Within 4 hours the crisis was over. The bait smell lured flies from far and wide. None were now flying, they all lay dead forming a thick black blanket over these fascinating blue granules in such a small pot. A quick sweep over an area about a meter square and the job was complete. I have since used the product at home as I prefer not to spray fly spray indoors around our pet birds or the fish tank. With a little thought a trap can be set outside. No more disturbing window sills!

Simone Morrison, Soul Friend Pet Cremations

MORE-MAG® EQUINE

More-Mag® is the simple solution to magnesium deficiency for equestrian and racing horses. New Zealand and Australia have a large pool of sport horses from great genetic lines that are sought after around the world. But with the magnesium deficient soils in both NZ and Australia, the problem of magnesium deficient pastures and feeds is common.

Further confounding the problem of magnesium deficiency is the huge drain of magnesium by the horse during exercise. Both muscles and the nervous system drain precious magnesium. No matter what the discipline, all horses involved in equestrian, harness racing and gallops, and other horse sports too, are likely to become magnesium deficient. Many top trainers and equestrian horse owners use and recommend More-Mag® as an effective supplement to help horses keep a calm and steady head to stay focused during training and competition. More-Mag® then aids in muscle recovery afterwards. More-Mag® has no withhold so it can be used all year round.

More-Mag® contains magnesium pidolate which is why it lasts for longer than traditional forms of magnesium. One More-Mag® dose poured on the feed will last for up to 10 days.

You can get More-Mag® from your local Veterinarian, RD1, PGG Wrightson, Farmlands or CRT store. You can also buy online from Animal Supplies

Available in: 500ml, 2 Litre, 5 Litres,

COMPETE ELECTROLYTES

Electrolytes are active in maintaining osmotic pressure, fluid balance, and muscle and nerve function. Electrolytes are lost in sweat and urine as a result of exercise and stress. Failure to maintain electrolyte balance can result in dehydration, fatigue, muscle weakness and loss of performance..

BASE: A simple electrolyte designed to replace with the animal sweats out and assist with muscle soreness.

ADVANCE: Suitable for endurance, racing, prolonged exercise and demanding conditions

EXTREME: Suitable for horses with exacting workloads and fast/galloping workouts. E.g. endurance, racing, prolonged exercise and demanding conditions.

Available in: 500g, 1kg, 2.5kg, 10kg, 20kg

ENERGRAZE

ENERGRAZE® is a nutritional supplement that supports health and well-being. ENERGRAZE® is a supplement developed by New Zealand nutritionists. ENERGRAZE® is a premium product, without the premium price tag.

Ideal situations to use ENERGRAZE® in a diet are for coat conditioning, to reduce feed refusals of low palatability feeds, to help encourage fussy eaters and animals in poor condition to eat, to supplement animals in work such as horses.

At times, all grazing animals struggle to get the essential vitamins and minerals that they need from pasture. ENERGRAZE® is the perfect addition to their diet. ENERGRAZE® contains essential vitamins and minerals that improve coat condition and general well-being, with the added benefit of probiotic – a mix of good gut bacteria. They support good digestive health for better nutrient uptake.

Available in: 2.5kg, 10kg and 20kg

EQUIDERM

Equiderm® has traditionally been the go-to for mudfever, and is also fast acting for other wounds, cuts and grazes both for the rider and the horse. There is visible repair overnight.

Look out for the early signs of mudfever if your horse is lame and there is heat or swelling of parts of the leg, and pain when you press. In these early stages before lesions occur you can often prevent it progressing by using a sulphur based barrier cream like Equiderm®.

Catching it early can save you money and time. Don't let mudfever put a dampener on the start to your season!

Available in: 250gm

GLIDE

Light smooth oil to prevent chafing from hobbles, harness boots etc. Apply freely to the area on the horse and to the hobble, girth, boot etc. Washes off easily with water.

Available in: 450gm, 2 Litre, 5 Litre
